About LightRiver

LightRiver specializes in transport solutions for mission-critical network operators across North America. As a System Integrator of Optical, Data and Wireless transport life-cycle solutions, LightRiver helps guide clients from initial market entry strategy, infrastructure design, installation and integration, program and network management, combined with maintenance and logistical support for their carrier-grade networks. LightRiver is proud to apply its years of experience with transport networks for the benefit of its 100+ clients in the Utility, Independent Telecom Service Provider and Government marketplace. For more information about how LightRiver can help you improve service and profitability, please visit our web site (www.LightRiver.com).

Lafayette, CA – LightRiver is proud to announce that it has received a coveted Utility Telecom Council (UTC) Expo 2008 Product Award under the Smart Meter/Smart Grid category with the Cornet Technology's "iVDO SmartEdge" video surveillance and video analytics solution at their annual conference in Orlando, FL.

SmartEdge distributed analytics and surveillance capabilities are ideal for enhancing security and operational controls, while minimizing the need for staff to constantly watch monitors waiting for something to happen. SmartEdge incorporates the intelligence to alert personnel when an event of interest occurs. These events can be defined by the user to factor in perimeter violations and complex scenarios to include loitering, placement of foreign objects that would tax conventional video surveillance. This improves efficiency

and accuracy of monitoring for applications such as: site security, traffic counting, trespassing violations, and many more. The SmartEdge system's de-centralized functionality also allows for greater scalability, interoperability, and infrastructure efficiencies when compared to traditional server-based video analytics solutions.

LightRiver and Cornet Technology have an exclusive nationwide marketing agreement to provide Utility customers with custom engineered surveillance and network solutions utilizing SmartEdge components. As a part of a total solution engineered to meet and exceed utility safety requirements, such as NERC and FERC, for complete monitoring of critical infrastructure, SmartEdge based solutions allow for greater monitoring capacity while maintaining accuracy and cost effectiveness.

"Cornet's SmartEdge solution further enables LightRiver to outfit our customers with next generation intelligent surveillance systems, while optimizing the bandwidth needs of their networks," – Glenn Johansen, CEO LightRiver Technologies

"We are very happy that SmartEdge earned this award. It validates the SmartEdge value proposition for the security needs of this market. It is a great start to our partnership with LightRiver" – Rudy Shankar, Director of Business Development for Cornet Technology.

LightRiver Technologies – Bringing Networks to Light!

About UTC

The Utilities Telecom Council (UTC) is a global trade association dedicated to creating a favorable business, regulatory, and technological environment for companies that own, manage, or provide critical telecommunications systems in support of their core business. Founded in 1948 to advocate for the allocation of additional radio spectrum for power utilities, UTC has evolved into a dynamic organization that represents electric, gas, and water utilities; natural gas pipelines; critical infrastructure companies; and other industry stakeholders.

About Cornet Technology, Inc.

Cornet Technology, Inc. (CTI) is a manufacturing and professional services company consisting of three divisions: Cornet Technology Communications designs and manufactures data, voice and video network switching products and provides integration services for federal and commercial markets; Video Convergence provides video products and comprehensive integration services to the Intelligent Transportation Systems (ITS), utility, energy, military, homeland defense, and other strategic security markets; and Optim Systems develops and integrates secure and unsecure video conferencing solutions for Department of Defense and commercial organizations. Founded in 1989, CTI is headquartered in Springfield, Virginia near Washington, D.C. For more information, visit CTI at www.cornet.com.
